

The Department of Civil Engineering is part of the Faculty of Engineering and Architecture and is fully accredited by the Pakistan Engineering Council. At the undergraduate level, the department implements Outcome Based Education and Outcome-Based Assessment models as recommended by the Engineering Accreditation Board of the Pakistan Engineering Council. The department has been actively contributing to educational infrastructure and academia since 2008, and its postgraduate MS program was introduced in 2015. A notable research focus highlights an active engagement in Affordable Housing Research, which aligns with national construction organizations aimed at providing housing facilities to homeless populations and boosting economic activity in Pakistan. The mission of the department is to produce competent professionals of high ethical values, enabling them for executive positions in civil engineering, higher studies in prestigious universities, life-long learning, and societal leadership. It also aims to provide a dynamic learning environment that emphasizes sustainable engineering practices, problem-solving skills, teamwork, and communication, while promoting cutting-edge research and leadership skills. The Program Educational Objectives state that civil engineering graduates are expected to demonstrate specific attributes three to five years post-graduation. These include essential knowledge and adequate civil engineering skills to meet industrial requirements, high ethical values and societal responsibilities for sustainable development, effective communication and strong interpersonal skills along with the capacity to lead and work collaboratively in teams, and the ability to keep abreast with the latest innovations and technological developments through continued professional practices, higher studies, and research.

For the Bachelor of Science in Civil Engineering program, the admission requirements state that applicants must have an F.Sc Pre-Engineering background from a recognized board or an equivalent certification with at least 60% marks, or a Diploma of Associate Engineer in the relevant field with a minimum of 60% marks. Candidates must also take the GAT General or the university's internal NTS test. The degree requirements mandate a total of 136 credit hours across 46 total courses, with a minimum academic standing of a 2.0 CGPA or higher.

The curriculum plan outlines the program schema by semester, with credit hour listings following the format of theory plus lab equaling the total credit hours. The first semester consists of Engineering Materials with no prerequisites for 2 plus 1 equaling 3 credit hours, Engineering Drawing with no prerequisites for 1 plus 2 equaling 3 credit hours, Reading and Writing Skills with no prerequisites for 2 plus 0 equaling 2 credit hours, Applied Calculus with no prerequisites for 3 plus 0 equaling 3 credit hours, and Pakistan Studies alongside either Islamic Studies or Ethics with no prerequisites for 1 plus 0 equaling 1 credit hour and 2 plus 0 equaling 2 credit hours respectively. The second semester includes Engineering Surveying-I with no prerequisites for 2 plus 1 equaling 3 credit hours, Engineering Geology with no prerequisites for 2 plus 1 equaling 3 credit hours, Engineering Mechanics with no prerequisites for 3 plus 1 equaling 4 credit hours, Differential Equations with a prerequisite of Applied Calculus for 3 plus 0 equaling 3 credit hours, Basic Electro-Mechanical Engineering with no prerequisites for 2 plus 1 equaling 3 credit hours, and Civil Engineering Drawing and Graphics with a prerequisite of Engineering Drawing for 1 plus 2 equaling 3 credit hours. The third semester involves Programming Fundamentals with no prerequisites for 2 plus 1 equaling 3 credit hours, Engineering Surveying-II with a prerequisite of Engineering Surveying-I for 2 plus 1 equaling 3 credit hours, Mechanics of Solids-I with a prerequisite of Engineering Mechanics for 2 plus 1 equaling 3 credit hours, Engineering Economics or Fluid Mechanics-I with no prerequisites for 2 plus 0 equaling 2 credit hours and 3 plus 1 equaling 4 credit hours respectively, and Quantity and Cost Estimation with no prerequisites for 2 plus 1 equaling 3 credit hours. The fourth semester covers Construction Engineering or Structural

Analysis-I with no prerequisites for the former and a prerequisite of Engineering Mechanics for the latter, both for 3 plus 0 equaling 3 credit hours, Soil Mechanics with no prerequisites for 3 plus 1 equaling 4 credit hours, Numerical Analysis with no prerequisites for 3 plus 0 equaling 3 credit hours, Environmental Engineering-I with no prerequisites for 2 plus 1 equaling 3 credit hours, and Concrete Technology with no prerequisites for 1 plus 1 equaling 2 credit hours.

The fifth semester requires Probability and Statistics with no prerequisites for 2 plus 1 equaling 3 credit hours, Fluid Mechanics-II with a prerequisite of Fluid Mechanics-I for 3 plus 1 equaling 4 credit hours, Communication and Presentation Skills or Organizational Behaviour with no prerequisites for 2 plus 0 equaling 2 credit hours each, and Reinforced Concrete Design-I or Transportation Planning with no prerequisites for 3 plus 0 equaling 3 credit hours each. The sixth semester encompasses Construction Management with no prerequisites for 2 plus 1 equaling 3 credit hours, Mechanics of Solids-II with a prerequisite of Mechanics of Solids-I for 2 plus 1 equaling 3 credit hours, Highway and Traffic Engineering with a prerequisite of Transportation Planning for 3 plus 1 equaling 4 credit hours, and Engineering Hydrology or Structural Analysis-II, where Hydrology has no prerequisites and Analysis-II requires Structural Analysis-I, for 2 plus 1 equaling 3 credit hours and 3 plus 0 equaling 3 credit hours respectively. The seventh semester includes Technical Report Writing with no prerequisites for 0 plus 1 equaling 1 credit hour, Entrepreneurship or Architecture and Town Planning with no prerequisites for 3 plus 0 equaling 3 credit hours each, Geotechnical and Foundation Engineering with a prerequisite of Soil Mechanics for 3 plus 1 equaling 4 credit hours, Reinforced Concrete Design-II with a prerequisite of Reinforced Concrete Design-I for 3 plus 1 equaling 4 credit hours, and Civil Engineering Project-I with no prerequisites for 0 plus 3 equaling 3 credit hours. The eighth semester concludes the undergraduate program with Geoinformatics with a prerequisite of Engineering Surveying-II for 1 plus 1 equaling 2 credit hours, Environmental Engineering-II or Steel Structures with the former requiring Environmental Engineering-I and the latter having no prerequisites, for 2 plus 0 equaling 2 credit hours and 3 plus 0 equaling 3 credit hours respectively, Hydraulics and Irrigation Engineering with a prerequisite of Fluid Mechanics-II for 3 plus 1 equaling 4 credit hours, Professional Ethics with no prerequisites for 2 plus 0 equaling 2 credit hours, and Civil Engineering Project-II with no prerequisites for 0 plus 3 equaling 3 credit hours.

For the Master of Science in Civil Engineering program, the admission requirements include an academic background of 16 years of education or an equivalent benchmark qualification, such as a four-year Bachelor of Engineering or Bachelor of Science degree in Civil Engineering from a Higher Education Commission recognized institution. Applicants must secure at least 60% marks under the annual grading setup, or a minimum program CGPA of 2.5 out of 4.0, and they must provide a valid GAT General result with a passing score of at least 50% marks. The degree requirements for this postgraduate program consist of 30 total credit hours, which include a total coursework requirement of eight advanced postgraduate courses, and students must maintain a minimum academic standing of a 2.5 CGPA or higher.
